

Arizona Report of Public Agency Performance on Dropout Rates for Students with Disabilities

Indicator 2: Dropout Rate

Percent of youth with IEPs dropping out of high school compared to the percent of all youth in the State dropping out of high school.

Measurement

An event rate methodology is used to calculate the dropout rate for all students in Arizona. It is a ratio of dropouts to the total enrollment in a particular year; therefore, this report is a ratio of students with disabilities who dropped out to the total enrollment of students with disabilities (within the grade range noted below).

Explanation of Indicator

Dropout rates are calculated for grades 8 through 12 and are based on a calendar year that runs from the first day of summer recess through the last day of school in the spring. The dropout rate is figured by comparing a school's total entries during a specific school year to the dropouts during that same period. It is important to note that this particular study produces a "snapshot" of Arizona dropout activity, in that it provides information only on students who drop out and fail to return during one school year. Students who drop out during one academic year and return in a subsequent year to complete their high school education are still counted as dropouts using the present formula.

PEAs with fewer than 10 students with disabilities who were in the grade range are reported with an *. In these instances, the results are not reported to ensure confidentiality.

All data are reported for school year 2006–2007.

State Target for SY 2006–2007: 5.5% of students with disabilities who exited dropped out.

State Average for SY 2006–2007: 4.2% of students with disabilities who were enrolled in grades 8–12 dropped out during the identified school year.
